DETAILED ACTION

Reasons for Allowance

Claims 1, 2, 4-7, 9-16, 19 and 20 are allowed.

With respect to independent claim 1, the prior art does not disclose in the claimed environment a cell growth container comprising a plurality of longitudinally axial extending pleats, at least one longitudinal drain panel, and at least one circumferential rib configured to be flush with the outermost portions of the drain panel.

The closest prior art is represented by the Smith reference which describes the use of a roller bottle comprising longitudinally axial extending pleats and a circumferential rib. As noted by Applicant, Smith, however, does not disclose a bottle configuration where a rib is flush with a drain panel. Instead, the rib of Smith clearly extends beyond the outermost region of the pleats since it is superimposed across the outer surfaces of the pleats.

The Serkes reference discloses a roller bottle configuration in which drain panels, pleats, and ribs are all flush such that the rib outer walls do not protrude beyond the outermost portions the pleats. Serkes, however, teaches that the ribs extend longitudinally and that the pleats are circumferentially formed – the inverse of Applicant's claimed configuration. The drain panels and ribs of Serkes run parallel to each other, and, accordingly, Serkes does not provide any teaching of how to form ribs that do not protrude radially outwardly upon intersection with a drain panel.
